

ABSTRACT

2 A desk lamp with function of generating negative ions comprises a lamp body and a
3 negative ion generator. The lamp body is consisted of a lamp base, a lamp arm and a
4 lampshade. The negative ion generator is set on an internal wall inside the lamp body
5 and has an air outlet plane toward a light region defined by the lampshade. The
6 negative ion generator may be installed an appropriated position inside the lamp body,
7 such as the lamp base, the lamp arm or the lampshade, so that negative ions from the
8 negative ion generator will be exhausted outside the lamp body.
